Dear Team,

I hope this email finds you well.

We're pleased to share your Test credentials below to begin the integration process with SuperPay:

For the testing phase please use the below table.

Merchant Code	Username	Password	API Key	Secure Hash Key
SUPER0001582_TST	super0001582_tst	Tst@superpay123	U2vpMIEpCo	ZDAAuQOEuS

Here is our Test Card credentials.

Card Number	Expiry Month	Expiry Year	Cardholder Name	CVV
5123450000000008	01	39	test	123

Best regards,

Subject: RE: Payment Integration Guide

Dear Team,

I hope this email finds you well.

Kindly note that you can find our API postman collection for the iframe and the documentation at the attachment.

SuperPay Domain : <https://merchant.super-pay.com/>

Kindly share with us your merchant notification URL as the documentation to Reconfiguring it with your merchant Code to have the ability to receive it

We'd be happy to walk you through the APIs and assist with the integration steps. If you're available, we'd like to schedule a meeting tomorrow before 5:00 PM to get everything set up smoothly. In the meantime, please go through the documentation and try to apply it. If anything is unclear, feel free to ask us we'll be available to answer your questions.

Please let us know what time works best for you.

Best Regards

Dear Omar,

I am writing to request the payment integration guide for our website. We are looking to implement a feature that allows customers to book and pay their reservations directly via credit card and other options you may provide on our site.

Could you please provide the guide for this payment gateway integration?

Additionally, I would appreciate the opportunity to schedule a brief call to walk through the setup. I am available daily at 1 PM, if this time doesn't work for you, please let me know what time we should schedule it on.

Thank you for your assistance.

Best regards,

Tech Admin
Travelholic

<rashad@travelholicg.com>

Hello Team,

I am integrating SuperPay with my booking system and would like your team to review my implementation and help with final webhook configuration.

PROJECT OVERVIEW

Business Flow:

- Customers book vacation rentals on our website (prices shown in USD)
- Payment processed through SuperPay (converted to EGP)
- Upon successful payment, booking automatically confirmed in our property management system (Hostaway)

Merchant Account: SUPER0001582_TST (Test Mode)

CURRENT IMPLEMENTATION

1. Payment Creation Flow

Endpoint Used:

POST /ordertransaction/api/1/sts/iframe/url

Our Process:

1. Customer fills booking form on our website
2. Our Cloudflare Worker converts USD price to EGP (using live exchange rates)
3. We generate HMAC-SHA256 signature: merchantOrderId + amount + currency
4. We call your API to get payment iframe URL
5. Display iframe in modal for customer to complete payment

Sample Payload We Send:

```
{
  "merchant": {
    "code": "SUPER0001582_TST",
    "apiKey": "U2vpMIEpCo"
  },
  "order": {
    "merchantOrderId": "TEMP-1764951936304-syieiv",
    "amount": 1618.38,
    "currency": "EGP"
  },
  "signature": "916af5017bec1a07220641809fce11d...",
  "clientId": "customer@email.com"
}
```

Current Status:

Working — iframe displays, 3DS authentication works, payment completes successfully.

2. Payment Notification (Webhook) — NEEDS SETUP

Based on your **Integration Guide V1.3 (page 8)**:

- You send a GET request with response parameter (base64-encoded JSON)
- Format: GET <https://webhook-url?response={base64-encoded-json}>
- Contains: merchantOrderId, orderStatus, paymentgwOrderId, amounts, etc.

Our Webhook Endpoint (ready and deployed):

<https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

What Our Webhook Does:

1. Receives GET request from SuperPay
2. Extracts and decodes base64 response parameter
3. Checks if orderStatus === 'PAY_COMPLETED'
4. If successful → automatically creates confirmed reservation in Hostaway

5. Returns success response to SuperPay

Current Status:

Waiting for configuration — webhook never receives notifications.

TEST RESULTS SO FAR

Successful Test Payment:

- **Order ID:** ae67e8cf6e5047aab0b9e69100825491
- **Status:** PAY_COMPLETED
- **Amount:** 1,522.24 EGP (from \$32 USD)
- **Card:** 512345****0008
- **3DS:** Completed successfully

Issue:

Webhook was never called after payment completion, so no reservation was created in Hostaway.

WHAT I NEED FROM YOU

Please review the above and confirm:

1. Is my implementation correct? Any issues with how I'm using your API?
2. **Merchant account:**
There is absolutely *nothing* in the merchant portal related to APIs, API keys, Secure Hash Key, webhook configuration, or any integration settings at all.
No section appears for:
 - API credentials
 - Secret keys
 - Integrations
 - Webhooks
 - Notifications
 - Technical settings
3. **Webhook Configuration:**
 - How do I configure the notification URL in my merchant account?
 - Should the URL be different for test vs production?
4. **Currency Support:**
 - How can I enable USD currency for my account?
 - Currently TEST mode only accepts EGP — is this a test mode limitation?
5. **Production Readiness:**
 - What steps are needed to move from TEST to PRODUCTION?

We also need the **LIVE API credentials** (merchant code, username, password, secure hash, API key, etc.)

TECHNICAL DETAILS

Integration Stack:

- Backend: Cloudflare Workers (serverless)
- Payment Flow: Payment-first (no reservation until payment confirmed)
- Security: HMAC-SHA256 signatures, HTTPS only
- Storage: Cloudflare KV (temporary booking data)

Webhook Implementation:

- Method: GET

- Authentication: None required (public endpoint, validates data integrity)
- Response: JSON with success/failure status
- Timeout: 30 seconds max processing time

Current Flow in Website:

<https://book.travelholic.com/listings/244517?start=2025-12-16&end=2025-12-17&numberOfGuests=1>

Go to **Book Now**, then fill and proceed.

I'm ready to provide any additional information, credentials, or access you may need to assist with this integration.

Thank you for your support!

Best regards,
Tech Team

Dear Noaman

I hope this email finds you well.

As discussed during our call, you can now use the redirection URL as outlined below. The redirection is working correctly.

Please add the following parameters to your API request with your own values:

"redirectionURL": "YOUR REDIRECTION URL",

"delayTime": 3000

This will redirect the client to your specified redirection URL and append the encoded query string at the end of the URL.

```
curl --location 'https://merchant.super-pay.com/ordertransaction/api/1/sts/iframe/url' \  
--header 'Content-Type: application/json' \  
--header 'Cookie: cookiesession1=678A3E368F4A822D2009B0126043A043' \  
--data '{  
  "merchant": {  
    "code": "SUPER0001582_TST",  
    "apiKey": "U2vpMIEpCo"  
  },  
  "order": {  
    "merchantOrderId": "Test13",  
    "amount": 100.00,  
    "currency": "EGP"  
  },  
  "clientId": "customer01",  
  "signature": "a7dc9c1968c13046c27a74ee2d9ff6e71989e01a7ac2cfe2c4a69ba5da969818",  
  "redirectionURL": "https://webhook.site/ae7c4e60-5a61-4db0-90a8-66f8abe8f160",  
  "delayTime": 3000  
}'
```

Note:

- Replace the sample values (merchantOrderId, clientId, signature) with your actual values.
- The redirectionURL ensures the client is redirected to your endpoint, with the encoded query string appended automatically.
- The delayTime parameter defines the wait time (in milliseconds) before redirection occurs.

Finally, as discussed during our call, I still need you to provide the merchant notification URL.

Hi Mohamed,

Thank you for suggesting a call.

We are available tomorrow, Monday at 1:00 PM

Please let us know if it works for you to discuss the details and hopefully have the right configuration.

Best regards,

Tech Team

Hello Team,

I am integrating SuperPay with my booking system and would like your team to review my implementation and help with final webhook configuration.

PROJECT OVERVIEW

Business Flow:

- Customers book vacation rentals on our website (prices shown in USD)
- Payment processed through SuperPay (converted to EGP)
- Upon successful payment, booking automatically confirmed in our property management system (Hostaway)

Merchant Account: SUPER0001582_TST (Test Mode)

CURRENT IMPLEMENTATION

1. Payment Creation Flow

Endpoint Used:

POST /ordertransaction/api/1/sts/iframe/url

Our Process:

1. Customer fills booking form on our website
2. Our Cloudflare Worker converts USD price to EGP (using live exchange rates)
3. We generate HMAC-SHA256 signature: merchantOrderId + amount + currency
4. We call your API to get payment iframe URL
5. Display iframe in modal for customer to complete payment

Sample Payload We Send:

```
{
  "merchant": {
    "code": "SUPER0001582_TST",
    "apiKey": "U2vpMIEpCo"
  },
  "order": {
    "merchantOrderId": "TEMP-1764951936304-syieiv",
    "amount": 1618.38,
    "currency": "EGP"
  },
  "signature": "916af5017bece1a07220641809fce11d...",
  "clientId": "customer@email.com"
}
```

Current Status:

Working — iframe displays, 3DS authentication works, payment completes successfully.

2. Payment Notification (Webhook) — NEEDS SETUP

Based on your **Integration Guide V1.3 (page 8)**:

- You send a GET request with response parameter (base64-encoded JSON)
- Format: GET <https://webhook-url?response={base64-encoded-json}>
- Contains: merchantOrderId, orderStatus, paymentgwOrderId, amounts, etc.

Our Webhook Endpoint (ready and deployed):

<https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

What Our Webhook Does:

1. Receives GET request from SuperPay
2. Extracts and decodes base64 response parameter
3. Checks if orderStatus === 'PAY_COMPLETED'
4. If successful → automatically creates confirmed reservation in Hostaway
5. Returns success response to SuperPay

Current Status:

Waiting for configuration — webhook never receives notifications.

TEST RESULTS SO FAR

Successful Test Payment:

- **Order ID:** ae67e8cf6e5047aab0b9e69100825491
- **Status:** PAY_COMPLETED
- **Amount:** 1,522.24 EGP (from \$32 USD)
- **Card:** 512345****0008
- **3DS:** Completed successfully

Issue:

Webhook was never called after payment completion, so no reservation was created in Hostaway.

WHAT I NEED FROM YOU

Please review the above and confirm:

1. Is my implementation correct? Any issues with how I'm using your API?
2. **Merchant account:**
There is absolutely *nothing* in the merchant portal related to APIs, API keys, Secure Hash Key, webhook configuration, or any integration settings at all.
No section appears for:
 - API credentials
 - Secret keys
 - Integrations
 - Webhooks
 - Notifications
 - Technical settings
3. **Webhook Configuration:**
 - How do I configure the notification URL in my merchant account?
 - Should the URL be different for test vs production?
4. **Currency Support:**
 - How can I enable USD currency for my account?
 - Currently TEST mode only accepts EGP — is this a test mode limitation?
5. **Production Readiness:**
 - What steps are needed to move from TEST to PRODUCTION?

We also need the **LIVE API credentials** (merchant code, username, password, secure hash, API key, etc.)

TECHNICAL DETAILS

Integration Stack:

- Backend: Cloudflare Workers (serverless)
- Payment Flow: Payment-first (no reservation until payment confirmed)
- Security: HMAC-SHA256 signatures, HTTPS only
- Storage: Cloudflare KV (temporary booking data)

Webhook Implementation:

- Method: GET
- Authentication: None required (public endpoint, validates data integrity)
- Response: JSON with success/failure status
- Timeout: 30 seconds max processing time

Current Flow in Website:

<https://book.travelholiceg.com/listings/244517?start=2025-12-16&end=2025-12-17&numberOfGuests=1>

Go to **Book Now**, then fill and proceed.

I'm ready to provide any additional information, credentials, or access you may need to assist with this integration.

Thank you for your support!

Best regards,
Tech Team

Hello Team,

I am integrating SuperPay with my booking system and would like your team to review my implementation and help with final webhook configuration.

PROJECT OVERVIEW

Business Flow:

- Customers book vacation rentals on our website (prices shown in USD)
- Payment processed through SuperPay (converted to EGP)
- Upon successful payment, booking automatically confirmed in our property management system (Hostaway)

Merchant Account: SUPER0001582_TST (Test Mode)

CURRENT IMPLEMENTATION

1. Payment Creation Flow

Endpoint Used:

POST /ordertransaction/api/1/sts/iframe/url

Our Process:

1. Customer fills booking form on our website
2. Our Cloudflare Worker converts USD price to EGP (using live exchange rates)
3. We generate HMAC-SHA256 signature: merchantOrderId + amount + currency
4. We call your API to get payment iframe URL
5. Display iframe in modal for customer to complete payment

Sample Payload We Send:

```
{
  "merchant": {
    "code": "SUPER0001582_TST",
    "apiKey": "U2vpMIEpCo"
  },
  "order": {
    "merchantOrderId": "TEMP-1764951936304-syieiv",
    "amount": 1618.38,
    "currency": "EGP"
  },
  "signature": "916af5017bece1a07220641809fce11d...",
  "clientId": "customer@email.com"
}
```

Current Status:

Working — iframe displays, 3DS authentication works, payment completes successfully.

2. Payment Notification (Webhook) — NEEDS SETUP

Based on your **Integration Guide V1.3 (page 8)**:

- You send a GET request with response parameter (base64-encoded JSON)
- Format: GET <https://webhook-url?response={base64-encoded-json}>
- Contains: merchantOrderId, orderStatus, paymentgwOrderId, amounts, etc.

Our Webhook Endpoint (ready and deployed):

<https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

What Our Webhook Does:

1. Receives GET request from SuperPay
2. Extracts and decodes base64 response parameter
3. Checks if orderStatus === 'PAY_COMPLETED'
4. If successful → automatically creates confirmed reservation in Hostaway
5. Returns success response to SuperPay

Current Status:

Waiting for configuration — webhook never receives notifications.

TEST RESULTS SO FAR

Successful Test Payment:

- **Order ID:** ae67e8cf6e5047aab0b9e69100825491
- **Status:** PAY_COMPLETED
- **Amount:** 1,522.24 EGP (from \$32 USD)
- **Card:** 512345****0008
- **3DS:** Completed successfully

Issue:

Webhook was never called after payment completion, so no reservation was created in Hostaway.

WHAT I NEED FROM YOU

Please review the above and confirm:

1. Is my implementation correct? Any issues with how I'm using your API?
2. **Merchant account:**
There is absolutely *nothing* in the merchant portal related to APIs, API keys, Secure Hash Key, webhook configuration, or any integration settings at all.
No section appears for:
 - API credentials
 - Secret keys
 - Integrations
 - Webhooks
 - Notifications
 - Technical settings
3. **Webhook Configuration:**
 - How do I configure the notification URL in my merchant account?
 - Should the URL be different for test vs production?
4. **Currency Support:**
 - How can I enable USD currency for my account?
 - Currently TEST mode only accepts EGP — is this a test mode limitation?
5. **Production Readiness:**
 - What steps are needed to move from TEST to PRODUCTION?

We also need the **LIVE API credentials** (merchant code, username, password, secure hash, API key, etc.)

TECHNICAL DETAILS

Integration Stack:

- Backend: Cloudflare Workers (serverless)
- Payment Flow: Payment-first (no reservation until payment confirmed)
- Security: HMAC-SHA256 signatures, HTTPS only
- Storage: Cloudflare KV (temporary booking data)

Webhook Implementation:

- Method: GET
- Authentication: None required (public endpoint, validates data integrity)
- Response: JSON with success/failure status
- Timeout: 30 seconds max processing time

Current Flow in Website:

<https://book.travelholiceg.com/listings/244517?start=2025-12-16&end=2025-12-17&numberOfGuests=1>

Go to **Book Now**, then fill and proceed.

I'm ready to provide any additional information, credentials, or access you may need to assist with this integration.

Thank you for your support!

Could you please provide an update on the following items, which are necessary to complete our integration and move to production?

1. Webhook Configuration: Confirmation that the notification URL has been set up on your end:

<https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

2. Production Readiness: The steps required to move our account from TEST to PRODUCTION.

3. LIVE API Credentials: The necessary live credentials (merchant code, username, password, secure hash, API key, etc.).

We look forward to your update.

Hello Team,

I am integrating SuperPay with my booking system and would like your team to review my implementation and help with final webhook configuration.

PROJECT OVERVIEW

Business Flow:

- Customers book vacation rentals on our website (prices shown in USD)
- Payment processed through SuperPay (converted to EGP)
- Upon successful payment, booking automatically confirmed in our property management system (Hostaway)

Merchant Account: SUPER0001582_TST (Test Mode)

CURRENT IMPLEMENTATION

1. Payment Creation Flow

Endpoint Used:
POST /ordertransaction/api/1/sts/iframe/url

Our Process:

1. Customer fills booking form on our website
2. Our Cloudflare Worker converts USD price to EGP (using live exchange rates)
3. We generate HMAC-SHA256 signature: merchantOrderId + amount + currency
4. We call your API to get payment iframe URL
5. Display iframe in modal for customer to complete payment

Sample Payload We Send:

```
{
  "merchant": {
    "code": "SUPER0001582_TST",
    "apiKey": "U2vpMIEpCo"
  },
  "order": {
    "merchantOrderId": "TEMP-1764951936304-syieiv",
    "amount": 1618.38,
    "currency": "EGP"
  },
  "signature": "916af5017bece1a07220641809fce11d...",
  "clientId": "customer@email.com"
}
```

Current Status:

Working — iframe displays, 3DS authentication works, payment completes successfully.

2. Payment Notification (Webhook) — NEEDS SETUP

Based on your **Integration Guide V1.3 (page 8)**:

- You send a GET request with response parameter (base64-encoded JSON)
- Format: GET <https://webhook-url?response={base64-encoded-json}>
- Contains: merchantOrderId, orderStatus, paymentgwOrderId, amounts, etc.

Our Webhook Endpoint (ready and deployed):

<https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

What Our Webhook Does:

1. Receives GET request from SuperPay
2. Extracts and decodes base64 response parameter
3. Checks if orderStatus === 'PAY_COMPLETED'
4. If successful → automatically creates confirmed reservation in Hostaway
5. Returns success response to SuperPay

Current Status:

Waiting for configuration — webhook never receives notifications.

TEST RESULTS SO FAR**Successful Test Payment:**

- **Order ID:** ae67e8cf6e5047aab0b9e69100825491
- **Status:** PAY_COMPLETED
- **Amount:** 1,522.24 EGP (from \$32 USD)
- **Card:** 512345****0008
- **3DS:** Completed successfully

Issue:

Webhook was never called after payment completion, so no reservation was created in Hostaway.

WHAT I NEED FROM YOU

Please review the above and confirm:

1. Is my implementation correct? Any issues with how I'm using your API?
2. **Merchant account:**
There is absolutely *nothing* in the merchant portal related to APIs, API keys, Secure Hash Key, webhook

configuration, or any integration settings at all.

No section appears for:

- API credentials
- Secret keys
- Integrations
- Webhooks
- Notifications
- Technical settings

3. Webhook Configuration:

- How do I configure the notification URL in my merchant account?
- Should the URL be different for test vs production?

4. Currency Support:

- How can I enable USD currency for my account?
- Currently TEST mode only accepts EGP — is this a test mode limitation?

5. Production Readiness:

- What steps are needed to move from TEST to PRODUCTION?

We also need the **LIVE API credentials** (merchant code, username, password, secure hash, API key, etc.)

TECHNICAL DETAILS

Integration Stack:

- Backend: Cloudflare Workers (serverless)
- Payment Flow: Payment-first (no reservation until payment confirmed)
- Security: HMAC-SHA256 signatures, HTTPS only
- Storage: Cloudflare KV (temporary booking data)

Webhook Implementation:

- Method: GET
- Authentication: None required (public endpoint, validates data integrity)
- Response: JSON with success/failure status
- Timeout: 30 seconds max processing time

Current Flow in Website:

<https://book.travelholiccg.com/listings/244517?start=2025-12-16&end=2025-12-17&numberOfGuests=1>

Go to **Book Now**, then fill and proceed.

I'm ready to provide any additional information, credentials, or access you may need to assist with this integration.

Thank you for your support!

Best regards,
Tech Team

Hello All,

We have completed the API integration based on the merchant guide; however, we are encountering some issues that are preventing our production launch.

Issue #1: Test Payment "Failed Process" Error

We are testing with the credentials provided in our merchant dashboard:

- API Key: WY9xJLDeb8
- Payment Mode: AUTH_AND_CAP

While the API call succeeds and the iframe displays correctly, entering the test card details results in a "Failed Process" error.

Issue #2: Webhook Not Receiving Callbacks

Our webhook is enabled in the dashboard, and the endpoint is publicly accessible, yet we have received zero callbacks from SuperPay.

- Callback URL: <https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

Looking forward for your assistance.

Thank you

Best regards,

Tech Team

Dear Travelholic Team,

As discussed, regarding the first issue, this occurred because your account is currently configured to operate in 3DS mode. You did not previously request reconfiguring the account to support the Authorization & Capture flow.

As for the second issue, kindly share a screen recording that demonstrates the full process from your side. This will help us better understand the issue and provide more accurate assistance.

Looking forward to your response.

Hello Team,

I am integrating SuperPay with my booking system and would like your team to review my implementation and help with final webhook configuration.

PROJECT OVERVIEW

Business Flow:

- Customers book vacation rentals on our website (prices shown in USD)
- Payment processed through SuperPay (converted to EGP)
- Upon successful payment, booking automatically confirmed in our property management system (Hostaway)

Merchant Account: SUPER0001582_TST (Test Mode)

CURRENT IMPLEMENTATION

1. Payment Creation Flow

Endpoint Used:

POST /ordertransaction/api/1/sts/iframe/url

Our Process:

1. Customer fills booking form on our website
2. Our Cloudflare Worker converts USD price to EGP (using live exchange rates)
3. We generate HMAC-SHA256 signature: merchantOrderId + amount + currency
4. We call your API to get payment iframe URL
5. Display iframe in modal for customer to complete payment

Sample Payload We Send:

```
{
  "merchant": {
    "code": "SUPER0001582_TST",
    "apiKey": "U2vpMIEpCo"
  },
  "order": {
    "merchantOrderId": "TEMP-1764951936304-syieiv",
    "amount": 1618.38,
    "currency": "EGP"
  },
  "signature": "916af5017bece1a07220641809fce11d...",
  "clientId": "customer@email.com"
```

}

Current Status:

Working — iframe displays, 3DS authentication works, payment completes successfully.

2. Payment Notification (Webhook) — NEEDS SETUP

Based on your **Integration Guide V1.3 (page 8)**:

- You send a GET request with response parameter (base64-encoded JSON)
- Format: GET <https://webhook-url?response={base64-encoded-json}>
- Contains: merchantOrderId, orderStatus, paymentgwOrderId, amounts, etc.

Our Webhook Endpoint (ready and deployed):

<https://travelholic-payment.tech-a49.workers.dev/api/superpay-webhook>

What Our Webhook Does:

1. Receives GET request from SuperPay
2. Extracts and decodes base64 response parameter
3. Checks if orderStatus === 'PAY_COMPLETED'
4. If successful → automatically creates confirmed reservation in Hostaway
5. Returns success response to SuperPay

Current Status:

Waiting for configuration — webhook never receives notifications.

TEST RESULTS SO FAR**Successful Test Payment:**

- **Order ID:** ae67e8cf6e5047aab0b9e69100825491
- **Status:** PAY_COMPLETED
- **Amount:** 1,522.24 EGP (from \$32 USD)
- **Card:** 512345****0008
- **3DS:** Completed successfully

Issue:

Webhook was never called after payment completion, so no reservation was created in Hostaway.

WHAT I NEED FROM YOU

Please review the above and confirm:

1. Is my implementation correct? Any issues with how I'm using your API?
2. **Merchant account:**
There is absolutely *nothing* in the merchant portal related to APIs, API keys, Secure Hash Key, webhook configuration, or any integration settings at all.
No section appears for:
 - API credentials
 - Secret keys
 - Integrations
 - Webhooks
 - Notifications
 - Technical settings
3. **Webhook Configuration:**
 - How do I configure the notification URL in my merchant account?
 - Should the URL be different for test vs production?
4. **Currency Support:**
 - How can I enable USD currency for my account?
 - Currently TEST mode only accepts EGP — is this a test mode limitation?
5. **Production Readiness:**
 - What steps are needed to move from TEST to PRODUCTION?

We also need the **LIVE API credentials** (merchant code, username, password, secure hash, API key, etc.)

TECHNICAL DETAILS**Integration Stack:**

- Backend: Cloudflare Workers (serverless)
- Payment Flow: Payment-first (no reservation until payment confirmed)
- Security: HMAC-SHA256 signatures, HTTPS only
- Storage: Cloudflare KV (temporary booking data)

Webhook Implementation:

- Method: GET
- Authentication: None required (public endpoint, validates data integrity)
- Response: JSON with success/failure status
- Timeout: 30 seconds max processing time

Current Flow in Website:

<https://book.travelholic.eg.com/listings/244517?start=2025-12-16&end=2025-12-17&numberOfGuests=1>

Go to **Book Now**, then fill and proceed.

I'm ready to provide any additional information, credentials, or access you may need to assist with this integration.

Thank you for your support!

Best regards,
Tech Team

Hi, I've attached a video showing the logs. The payment is processed successfully and an invoice is generated, but the webhook isn't being sent
